## BOSSARD 2BIN

# Traditional kanban system

For many years now, it has been a reliable inventory management solution thanks to its simplicity.
At least two bins are used for all parts and are arranged on shelves with one behind the other. When one of the two bins is empty, you place the empty bin at an agreed location. Bossard collects, refills and then returns them at regular intervals.

## FEATURES

**ARIMS** – Access to Operation Dashboard

**MANUAL ORDER RELEASE**

## YOUR BENEFITS

- lower your total cost of ownership
- increase your efficiency
- enhance your profitability
- more time for your core activities

## BOSSARD 2BIN

Demand recognition

Seamless order management

**Smart Factory Logistics**

Point of use replenishment

Consolidation and delivery

### ORDER PROCESS WITH BOSSARD 2BIN

1. The empty bins are moved to the collection point.
2. Bossard collects the empty bins on a regular basis and refills them.
3. Previously refilled bins are brought at the same time as the empty ones are collected, as a direct and immediate replacement.
4. Depending on the pre-defined agreement, we deliver the bins either to the dock, the collection point or directly to the point of use.
