

LiteWWeight[®] Lotus Abalone

WHAT IS MULTIMATERIAL-WELDING[®]?

MultiMaterial-Welding (MM-Welding[®] in short) is a Fastening Technology Platform that uses ultrasonic energy to partially liquify thermoplastic materials to create a functional and strong connection within lightweight materials in fractions of a second.

SERIAL PRODUCTION

To install the MM-Welding[®] fasteners, ultrasonic welding equipment is necessary, which is available through the MM-Welding[®] production systems offered by Bossard. From stand-alone systems for small scale and flexible projects, up to fully automated equipment for large scale serial production projects are available.

LITEWWEIGHT[®] LOTUS

LiteWWeight[®] Lotus is a fast and reliable connection concept for fibrous components (woven and non-woven) and textile structures.

- Very fast processing time of ~1 second
- High strength due to intensive integration in the fibrous matrix
- No markings on the opposite side, even in thin and sensitive materials
- Only 1 side required for installation
- Available in several common thermoplastics

LITEWWEIGHT® LOTUS ABALONE

Clip retainer for floor mates

Technical data:

- available diamteres: 30mm and 48mm

- Different clip shapes

LITEWWEIGHT LOTUS ABALONE

The LiteWWeight® Lotus Abalone can be the perfect substitution for clipped floor mate retainers. The male part is mounted in a one step process within fractions of a second.

THE ONE COMPONENT CLIP SOLUTION

MM-Welding[®] LiteWWeight[®] Lotus Abalone accelerates the mounting of the male clip component considerably. No punching/cutting required and eliminate the need for connecting two separate components. This clip can also be attached to the floor/carpet after the sound insolation is attached to the backside of the floor/carpet.

Conventional two component clip solution.

ADVANTAGES

- Reduced cycle time
- Reduced costs due to the fast process and less parts to manipulate
- Two piece clip into one piece
- No pre hole need
- Eliminate risk of hole being too large and part moving

MM-Welding[®] one component clip solution.

- Eliminate risk of floor mat moving
- Remove tolerance necessary for holes
- No noise from underbody due to space between hole and part
- Eliminate risk of water/moisture coming up through carpet from hole
- Access from only one side needed

MM Welding® technology is a proprietary technology of MultiMaterial-Welding AG, Switzerland, and is licensed by Bossard AG.

MATERIAL MultiMaterial-Welding™ technology is based on the patented WoodWelding® technology of WoodWelding SA and is WELDING licensed by MultiMaterial-Welding AG, Switzerland
